

## PRODUCT FOCUS

# Geniune Brake Fluid

## What is it?

Brake fluid is a type of hydraulic fluid used in hydraulic brake applications in automobiles to provide optimal braking performance.

## What does it do?

- Brake fluid is used to transfer force under pressure from where it is created through hydraulic lines to the braking mechanism near the wheels.
- Lubricates braking system components.
- Helps prevent corrosion of metal brake lines.

## Benefits

- Manufacturer's Genuine Fluid.
- Higher wet boiling point than some competitors products.
- Exceeds DOT 3 requirements.
- Will remain fluid and will not freeze.

## Additional information

- Store brake fluid in a clean, dry area and only in its original container.
- Always reseal the container after use to keep moisture out.
