

## SERVICE FOCUS

# Brake System

<https://www.youtube.com/watch?v=P-sr-qmGdUY>

## Brake fluid

- This hydraulic fluid distributes pressure via the master cylinder to the wheels. Contact your Lexus Assistant Service Manager for appropriate brake fluid service intervals for your Lexus vehicle.

## Disc brake

- When the brakes are applied, the caliper clamps the brake pads against both sides of the rotor, which slows the rotation of the front wheels.

## Brake booster

- Increases the force applied to the brake master cylinder in response to the driver's pressure on the brake pedal.

## Master cylinder

- Changes the force applied to the brake pedal into hydraulic force.
